PROFESSIONAL SUMMARY

Computer Engineering student at Trakya University with hands-on experience in React/TypeScript, FastAPI-based web applications, retrieval-augmented AI systems, PostgreSQL, and Python data/ML projects. Built and deployed production-oriented projects, contributed to a real software codebase, and gained institutional IT work experience. Focused on readable code, testing, debugging, and practical engineering decisions.

EDUCATION

Trakya University | B.Sc. in Computer Engineering 2024-2028 (Expected)

EXPERIENCE

Software Development Intern | Corevo 2026

- Investigated a data-persistence bug in a React/TypeScript content update workflow by tracing form state, canvas transformations, and API payloads end to end.
- Implemented backward-compatible persistence for dynamic text and image values, including initialization of React Hook Form from stored values and support for duplicate placeholders by canvas index.
- Hardened edge cases around dotted placeholder names and update payload integrity; validated the changes with targeted tests, ESLint, and a production build.

İŞKUR Gençlik Program Participant | Trakya University IT Department Dec 2025-Jun 2026

- Worked part-time within Trakya University's Information Technology Department through the İŞKUR Gençlik Program while continuing undergraduate studies.

SELECTED PROJECTS

DevLens — Developer Portfolio Intelligence 2026

Next.js, React, TypeScript, FastAPI, Python, PostgreSQL, SQLAlchemy, Alembic, Docker, GitHub Actions, Gemini API, Render, Neon

- Built and deployed a web application that analyzes public GitHub profiles and repositories with deterministic evidence/scoring and optional Gemini interpretation.
- Engineered versioned PostgreSQL snapshot caching, migrations, bounded repository concurrency, CI quality gates, structured logging, and separate frontend/backend production services while keeping AI unable to alter evidence or scores.

AI Search Engine — Citation-Aware RAG Workspace 2026

React, TypeScript, Vite, FastAPI, Qdrant, Tavily, Ollama, RAG, SSE, IndexedDB, Vercel, Render

- Built a citation-aware research workspace that combines live Tavily web retrieval with selected PDF, TXT, Markdown, and DOCX evidence across Web, Files, and Hybrid modes.
- Implemented scoped Qdrant retrieval, per-message source inspection, conversational follow-ups, SSE-streamed answers, browser-local IndexedDB history, and a deterministic offline quality gate with 29/29 checks passing.

Customer Churn Analysis — Machine Learning Project 2026

Python, pandas, scikit-learn, EDA, Logistic Regression, data preprocessing, visualization

- Prepared the 7,043-record IBM Telco Customer Churn dataset and trained a Logistic Regression baseline achieving 80.45% test accuracy versus a 73.42% majority-class baseline; evaluated precision, recall, F1-score, and confusion matrix.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML, CSS

Web & Backend: FastAPI, React, Next.js, Vite, REST APIs, SSE

Data & AI: RAG, Qdrant, Tavily, Ollama, Gemini API, pandas, scikit-learn, EDA

Database & Infrastructure: PostgreSQL, SQLAlchemy, Alembic, Docker, GitHub Actions, Render, Vercel, Neon

Tools & Practices: Git, GitHub, Linux, VS Code, debugging, CI, production QA, technical documentation

TRAINING

Data Science & Machine Learning Bootcamp | Türkiye Yapay Zeka Akademisi Jul-Aug 2026

- Completed a three-week program covering Python fundamentals, data analysis, visualization, preprocessing, introductory machine learning, and project presentation.
